REPRESENTATIVE-FIGURES: 1

ABSTRACT:

A method, system, and computer program product for identifying at least one three-dimensionally extended lesion within a volumetric region encompassing an inner surface, an outer surface, and intervening tissue of a target organ. The method includes: (1) generating a set of voxels representing a total scanned volume from a set of cross-sectional images of the target organ; (2) performing segmentation to extract a set of voxels representing the volumetric region from the set of voxels

representing the total scanned volume; (3) detecting a set of candidate lesions based on geometric feature $\underline{\text{values of each voxel}}$ in the set of $\underline{\text{voxels}}$ representing the volumetric region; and (4) selecting the at least one three-dimensionally extended lesion from the set of candidate lesions based on at least one of volumetric, morphologic, and texture feature values of each lesion in the set of candidate lesions.

CROSS-REFERENCE TO CO-PENDING APPLICATIONS

[0001] The present application is related to and claims priority to U.S. Provisional Application Serial No. 60/329,322, filed Oct. 16, 2001. The contents of that application are incorporated herein by reference.
